Investment minimums ²	Initial investment: \$25,000 Additional investment: \$5,000 Switch/withdrawal: \$5,000
Management cost as at 30 June 2009 ^{3,4} (% pa)	0.90

Investment objective

To provide capital growth of your investment over the medium to long term by investing in a diversified portfolio of growth assets with some defensive asset exposure, and to achieve a total return after fees in excess of the Trust's benchmark over a rolling five year period.

Investor profile

The Trust may be suitable for investors:

- with an investment horizon of approximately five years;
- with a medium to high level of risk tolerance; and
- who are seeking capital growth with some income through a well diversified portfolio.

Investment strategy

The Trust generally gains its exposure to a diversified portfolio of investments through a mix of investment managers.

The growth orientation of the Trust means it has a greater exposure to growth assets such as Australian and international property and shares and alternative equity, with a moderate exposure to defensive assets such as cash, fixed interest and alternative debt.⁵

The Trust is authorised to utilise approved derivative instruments for risk management purposes subject to the specific restriction that the derivative instruments cannot be used to gear portfolio exposure.

The underlying investment managers may utilise strategies for the management of currency exposure. The level of currency hedging used for the Trust will vary from time to time. The Trust has the capacity to change the level and nature of the currency overlay to manage the Trust's currency risk.

¹ The composite benchmark incorporates the applicable indices (or benchmark) for each asset class weighted against the Trust's target (or neutral) allocation.

² Investment and withdrawal minimums do not apply for investments in the Trust via a master trust or investor directed portfolio service (IDPS). Please refer to the current IOOF MultiMix Trusts Product Disclosure Statement and Supplementary Product Disclosure Statement (PDS), IDPS offer document or master trust PDS for more information.

³ The actual management costs are subject to change from time to time and may vary slightly from the estimated management costs (as detailed in the PDS) depending on changes to the composition of the Trust's underlying assets, changes in exposure to underlying investment managers and where any unusual or non-recurrent expenses are incurred.

⁴ The management cost listed excludes any estimated performance fees that may be charged by underlying investment managers from time to time. Any performance fees incurred will be an additional cost. Please refer to the PDS for full details on fees and costs.

⁵ For reasons of investment efficiency, the Trust may gain its exposure to each sector by holding units in other IOOF Group unit trusts and/or through direct investment holdings.

Performance as at 31 March 2010^{6,7,8}

	3 mths %	6 mths %	1 year %
Distribution	0.00	1.45	4.26
Growth	1.44	2.13	17.73
TOTAL	1.44	3.58	21.99
Benchmark ⁹	1.73	5.85	21.37
Added Value	-0.29	-2.27	0.62

Important Note: Further performance information is available in the 'IOOF Multi Manager Funds Performance' flyer. The flyer also includes **indicative** long term blended performance of the previous IOOF Multi Investment Manager (MIM) Funds and IOOF MultiMix Trusts.

Trust commentary

The Trust returned 1.44 per cent for the quarter, under-performing its benchmark by 0.29 per cent.

The Australian equity market finished higher in the March quarter. Sovereign debt concerns continued to weigh on investor sentiment in Europe. Investors were also concerned about the gradual removal of stimulus by the US Government and the tightening of credit in China. By quarter end, better than strong growth in China and improvement in bulk commodity prices helped the S&P/ASX 300 return 1.25 per cent for the period.

The quarter began with concerns over sovereign debt in Europe. Investors were also concerned about the gradual removal of stimulus by the US Government and the tightening of credit in China. However, positive drivers in the form of strong export numbers from Asia, and better than expected earnings reports and an improving job market in the US, helped the market to rebound strongly. The MSCI World Ex-Australia Index returned 4.7 per cent in local currency terms over the period.

The appetite for risk, interest rate differentials and the improved outlook for commodity prices helped the AUD appreciate against most of the major currencies. The AUD appreciated most strongly against the Euro as investors grew wary of the deteriorating situation in Greece. This detracted from the returns of unhedged investors. The MSCI World Ex-Australia Index returned 1.2 per cent in AUD terms.

Actual asset allocation as at 31 March 2010¹⁰

The Trust's allocation to property performed well during the quarter. International listed property out-performed domestic listed property by more than 7 per cent over the quarter on a hedged basis, extending its lead over the year. US hotels were the top performing property type for the quarter followed by shopping centres. Direct property also outperformed domestic listed property for the period.

The credit market seemed to brush off concerns in Greece and instead, focused on the improved earnings numbers on US corporates and better than expected news from Euro and UK financials. The credit market also benefited from a reduction in default predictions. Investment grade credit outperformed government bonds and equities for the period. Market liquidity also helped the credit markets as investors sought shorter dated securities and higher yields. Mortgage backed securities also benefited from these technical factors.

⁶ Performance is net of management costs and expenses as disclosed in the PDS. Performance is based on exit price to exit price for the period and assumes that all distributions are reinvested. Management costs and other expenses are accounted for in the exit price.

⁷ Past performance is not a reliable indicator of future performance.

⁸ All performance figures have been rounded to two decimal points.

⁹ The benchmark incorporates the applicable indices for each asset class weighted against the Trust's target (or neutral) allocation. Please refer to the PDS for more details on the benchmark used for the Trust.
